SCHWIND eye-tech-solutions: 28 percent growth of revenues in fiscal year 2005/2006

Kleinostheim, Germany, July 2006

SCHWIND eye-tech-solutions achieved a significant revenue increase in fiscal year 2005/2006. The vendor of medical lasers for the correction of ametropia and the necessary diagnostic and surgical peripheral devices generated revenues of nearly 24 million euros. Compared to the previous year, this amounts to an increase of 28 percent. This success was largely attributed to the ESIRIS excimer laser, which bundles the company's entire technological and applicative know-how. Meanwhile, the 600th SCHWIND excimer laser has already been installed. The Carriazo-Pendular microkeratome, with its unequalled precision and exact predictability of flap thickness, brought in the second largest amount of revenues. The company intends to stay the course of its dynamic growth. The respective foundation has been laid: For fiscal year 2006/2007, SCHWIND can already post an order volume in the sum of around six million euros.
